PROFILE

Experienced software developer with over 5 years of expertise in web development using Ruby on Rails, and 1+ year of development using Golang. skilled in designing, developing, and maintaining robust and scalable web applications, with a strong background in front-end technologies like HTML, CSS, and JavaScript. Additionally, I have a keen interest in exploring new technologies and languages.

Highly motivated and detail-oriented, I am dedicated to delivering high-quality code and possess strong problem solving abilities with a passion for clean and maintainable code.

SKILLS

Ruby (Ruby On Rails)

Elixir

Erlang

SQL

C#

Golang

PHP

Javascript, HTML, CSS

Docker

WORK EXPERIENCE

Full Stack Engineer

Cleq OÜ

Aug 2018 - Oct 2020

This is a software company that handles numerous projects, primarily from Europe. I worked here as a Fullstack Developer, contributing to various projects, mainly utilizing Ruby on Rails, Laravel, and PHP. My primary responsibilities included creating, maintaining, and delivering products to production.

We employed AWS for most of our projects, which provided me with experience in several AWS services such as Beanstalk, ECS, EC2, S3, ECR, and RDS. This exposure also enhanced my familiarity with containerization using Docker.

Additionally, I developed RESTful APIs and worked on frontend development and integration, primarily using Vue.js and React. I was also responsible for several third-party integrations, including payment gateways and currency exchange services.

Backend Engineer

DamoGo

Jan 2021 - Feb 2022

This is a small startup with a compact team, so we handle all aspects of the development process, including planning, development, testing, maintenance, and product deployment. I work here as a Backend Developer, responsible for building a GraphQL API for both our mobile app and website. The primary programming languages I use are Rust and Ruby, with a MySQL database.

My main responsibilities include creating and maintaining the GraphQL API, managing the CI pipeline, and integrating with third-party APIs such as payment gateways. Due to budget constraints, we opted for a regular VPS, supported by GitLab CI for our continuous integration needs.

Software Engineer

Mekari

Mar 2022 - Sep 2024

Part of the attendance team in the HRIS software.

Drafting RFCs prior to developing major features, building new microservices primarily in Golang and Ruby, and maintaining the existing codebase to support user attendance activities, including clock-ins, clock-outs, scheduling, and working hours calculations. The technology stack includes Ruby on Rails, PostgreSQL, Karafka (for handling Kafka), and Sidekiq (for background job processing).
